Shivanshu Srivastava

Varanasi, India – 221010 | +91 9198865041 | shivanshu.srivastava.work@gmail.com | LinkedIn | GitHub | Portfolio

Summary

B.Tech CSE graduate (2026, GPA: 8.49) with hands-on experience building backend services in Python using FastAPI, MongoDB, and SQLite. Comfortable with REST API design, database queries, authentication, and writing automation scripts. Looking for Python Developer or Backend Trainee roles.

Education

Sandip University **2022 – 2026**
B.Tech, Computer Science and Engineering (GPA: 8.49) *Nashik, Maharashtra*

GlenHill School **2018 – 2021**
SSC & HSC *Varanasi, Uttar Pradesh*

Technical Skills

- **Languages:** Python, SQL, HTML/CSS
- **Backend & Web:** FastAPI, Flask, REST APIs, BeautifulSoup, Requests
- **Databases:** MongoDB, SQLite, MySQL, SQLAlchemy ORM
- **Tools & Practices:** Git, GitHub, GitHub Actions, Postman, Linux, JWT Auth, AsyncIO

Experience

Brain O Vision **Jan 2024 – Mar 2024**
Machine Learning Intern *Hyderabad, India*

– Preprocessed structured datasets using Pandas and NumPy – handled missing values, encoded categorical features, and applied feature scaling.

– Trained and evaluated classification models (Decision Tree, Random Forest) with Scikit-Learn; measured performance using accuracy, precision, and confusion matrices.

Code Alpha **Nov 2025 – Nov 2025**
Python Programming Intern *Lucknow, India*

– Built modular Python scripts for data processing and file management using standard libraries (os, json, csv, datetime).

– Developed CLI utilities with structured error handling and integrated REST API data fetching using the Requests library.

Projects

TradeFlow – Trading Journal & Analytics API
Live | Python, FastAPI, MongoDB, JWT

– Built a REST API with FastAPI and MongoDB for logging, filtering, and analyzing stock trades with per-user data isolation.

– Implemented JWT authentication with bcrypt password hashing; used MongoDB aggregation pipelines to compute portfolio metrics like win rate and net P&L.

NSE Swing Screener
Live | Python, FastAPI, SQLite, BeautifulSoup

– Developed a stock screening service that scrapes daily NSE data and flags potential swing setups based on technical indicators.

– Used SQLite to cache historical data locally and scheduled background scraping jobs with APScheduler to keep results current.

ThirdEye – Organizational Memory System
Source | Python, FastAPI, ChromaDB, LangChain

– Built a document Q&A backend that chunks uploaded files, stores vector embeddings in ChromaDB, and retrieves relevant context for LLM-powered answers.
– Exposed REST endpoints via FastAPI for document upload, semantic search, and conversational queries over a knowledge base.

NSE Breakout Monitor
Source | Python, BeautifulSoup, GitHub Actions, Telegram API

– Wrote a Python script that scrapes Nifty 500 data and identifies momentum breakouts based on price and volume thresholds.
– Automated daily runs via GitHub Actions cron and integrated Telegram Bot API for instant breakout notifications.

Hackathons

ThirdEye – Org Memory System (Top 10) **April 2026**
Sunhacks 2026

– Built the AI chatbot and knowledge-graph visualization features for an organizational memory tool; placed in the Top 10.

HVAC Smart Control System (Top 10) **April 2024**
Sunhacks 2024 by Sandip University & ESDS

– Contributed to a predictive ML pipeline for energy-efficient HVAC climate control; team placed in the Top 10.

Sales Prediction Model (Winner) **Oct 2023**
AICTE Data Science Hackathon

– Won 1st place by building regression models for sales forecasting and product performance prediction using Scikit-Learn and Pandas.
