

SHIVANSHU SRIVASTAVA

+91 9198865041 | shivanshu.srivastava.work@gmail.com | LinkedIn | GitHub | Portfolio

Summary

Full-stack developer focused on AI-powered financial systems, quantitative trading infrastructure, and intelligent productivity platforms. Experienced in building applications using Python, FastAPI, Next.js, MongoDB, and modern AI tooling. Emphasis on automation, quantitative analytics, and clean product design.

Education

Sandip University

2022 – Present

B.Tech, Computer Science and Engineering

GlenHill School

2018 – 2021

SSC & HSC

Technical Skills

- Languages: Python, SQL, TypeScript, JavaScript, HTML/CSS
- Frameworks & Concepts: FastAPI, Next.js 15, Flask, LangChain, REST API, Microservices, Agile, Scrum
- Libraries: Pandas, NumPy, TA-Lib, Scikit-learn, Recharts, SQLAlchemy
- Tools & Infrastructure: Docker, Kubernetes, CI/CD, DevOps, AWS, Azure, PostgreSQL, MongoDB, Vercel, GitHub Actions, JIRA
- Core: Data Structures, Algorithms, Unit Testing, Debugging

Internships

Brain O Vision

Jan 2024 – Mar 2024

Machine Learning Intern

Hyderabad, India

- Fine-tuned ML models improving prediction accuracy by 15% and workflow efficiency by 20%.
- Executed feature engineering and clustering for behavioral data analysis.
- Led customer segmentation initiative using K-Means clustering, identifying 5 distinct customer profiles.

Code Alpha

Nov 2023 – Dec 2023

Python Programming Intern

Lucknow, India

- Engineered Python automation scripts and clean-code software solutions, improving execution speed by 15%.
- Strengthened core algorithm implementation and real-world dev workflows.
- Streamlined code structure ensuring better maintainability across multiple projects.

Projects

TradeFlow

Live | Next.js 15, TypeScript, FastAPI, MongoDB, TailwindCSS

- Trading intelligence terminal engineered for intraday and swing traders.
- Integrated risk management with automated position sizing and stop-loss logic.
- Real-time watchlists, AI-powered behavioral coaching, and interactive P&L heatmaps.

NSE Swing Screener

Live | Python, FastAPI, SQLite, Railway

- Quantitative stock screening terminal scanning 2,600+ stocks for swing trading opportunities.
- Detects Minervini Stage 2, VCP, SFP, and IPO base patterns using Relative Strength ranking.

DietGPT

Live | *Flask, Firebase, LangChain, Groq, OpenRouter*

- AI-powered nutrition and fitness coaching platform inspired by modern health design systems.
- Smart meal logging with automatic calorie/macro estimation and personalized diet generation.

NSE Momentum Burst Scanner

Source | *Python, GitHub Actions, Telegram API*

- Orchestrated an automated breakout detection engine scanning the Nifty 500 universe.
- Multi-phase breakout filtering with EMA trend structure and programmatic Telegram alerts.

Aeronexis AI

Live | *Next.js 15, Tailwind CSS, Framer Motion, MongoDB Atlas*

- Engineering design platform providing a browser-based experience for engineering workflows.
- Architected a landing page and waitlist acquisition system using MongoDB.

Shooters of India

Live | *HTML/CSS, JavaScript*

- Search-optimized platform for shooting sports with integrated performance analytics.
- Improved asset delivery and implemented statistical tracking for athlete performance.

Clima-Cast

Source | *Python, scikit-learn*

- Modelled an MLPRegressor neural network to predict temperature and humidity from IoT data.
- Implemented data pipelines for CSV loading, model training, and performance visualization.

Third Eye

Source | *Python, ChromaDB, RAG*

- Autonomous Organizational Memory system capturing decisions, rationale, and stakeholder context.
- Implements searchable semantic memory in ChromaDB with natural-language Q&A over context.

Hackathons

Data Science Hackathon

Oct 2023

AICTE

- Built regression models and performed feature engineering on 1000+ records.

HVAC Smart Control System

2024

SUNHACKS 2024

- Designed a predictive model for HVAC energy optimization and climate control.
